Group I does not require the special technical features of: 1) 2n conductors being conducted over the stator teeth in a substantially constant position over the entire coil length as required by Group II; and 2) a first group n1 and a second group n2 of conductors as required by Group III.

Group II does not require the special technical features of: 1) a first group n1 and a second group n2 of conductors as required by Group III; and 2) a predetermined number of conductors placed in parallel as required by Group I.
